FLOWS INCREASING ON THE ABITIBI AND MATTAGAMI RIVER SYSTEMS ***Beware of Changing Ice Conditions***

TIMMINS – With warmer temperatures settling at the top of the watershed over the last week, flows into the Abitibi and Mattagami River Systems are increasing.

Ontario Power Generation (OPG) is urging the public to monitor ice conditions on the Abitibi, Mattagami and Moose Rivers closely as discharge from OPG facilities, such as the Lower Mattagami Complex and Otter Rapids Generating Station, will continue to increase due to melting snow and spring precipitation.
