

Moose Factory Island Fire & Rescue

River Surveillance Update #16 - May 8, 2014

Time: 7:00pm - 7:45pm

We had gone on our flight this evening up the river to locations of the French River Breakup and the Moose River Breakup. During our flight there have been minor changes from this morning and afternoons flight.

Minor changes include:

- a slight movement of ice towards Moosonee
- water levels dropped 1-2 feet from where the Moose River Breakup was located earlier this morning (above the Abitibi River mouth on the Moose River)
- water levels continue to remain steady at current breakup locations just south of Moosonee and south of Moose Factory
- slight increase in openings between the 2 different breakup locations
- there was no movement at the time of this flight
- water levels remain high at locations of breakup
- ice conditions continue to deteriorate each day

Michael Delaney/Curt Wesley – Moose Factory Emergency Operations Coordinators
Steve Crown – Moosonee Community Emergency Management Coordinator
